

Prashant Rawat

Cloud & DevOps Engineer

Sector-15, Noida, Uttar Pradesh, India | +91 7300762003 | prashantrawat733@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Proactive Cloud and DevOps fresher with hands-on experience in AWS infrastructure automation, CI/CD pipelines, and containerized application deployment. Strong foundation in Infrastructure as Code (Terraform), Linux environments, and scripting, with a problem-solving mindset and eagerness to learn modern DevOps practices. Passionate about automation, reliability, and cloud-native technologies, seeking an opportunity to contribute to real-world cloud projects while continuously upskilling.

Technical Skills

- **Cloud Platform (AWS):** EC2, S3, VPC, IAM, RDS, Route 53, Load Balancing (ALB, NLB), Auto Scaling, CloudFront, Global Accelerator, DynamoDB, ACM, KMS, Secrets Manager, WAF, CloudWatch, CloudTrail, SQS, SNS, CloudFormation
- **Infrastructure as Code:** Terraform (Modules, Workspaces, Remote State/Backend), HCL, CloudFormation
- **DevOps & Containers:** Docker, Kubernetes, Ansible, Jenkins, GitHub Actions, CI/CD, NGINX (Reverse Proxy & Load Balancing)
- **Version Control:** Git, GitHub, GitLab
- **Programming & Scripting:** Python, Bash, AWS CLI, Flask, MongoDB, Scripting with AI
- **Operating Systems & Networking:** Linux, Windows, Networking Fundamentals

Experience

DevOps Intern – Project Based Internship

Oct 2025 – Dec 2025

Elevate Labs (Remote)

- Completed 8+ hands-on projects covering AWS infrastructure automation, containerization, orchestration, and CI/CD tooling across multiple real-world simulated environments and use cases.
- Designed and implemented real-world applications based on project requirements, translating business specifications and technical documentation into fully working, production-style cloud infrastructure.
- Gained practical, end-to-end experience in problem solving, root-cause debugging, and integrating multiple DevOps tools and platforms into cohesive, automated, and repeatable workflows.

Key Projects

AWS 3-Tier Architecture Deployment using Terraform – Terraform, AWS (VPC, ALB, ASG, RDS, IAM)

[GitHub](#)

- **Architecture:** Designed and deployed a highly available, production-style 3-tier AWS architecture (Web, App, and Database tiers) spanning multiple Availability Zones using reusable, parameterized Terraform modules for consistency.
- **Networking & Security:** Provisioned a custom VPC with public/private subnets, external and internal Application Load Balancers, NAT/Internet Gateways, route tables, and 5 dedicated security groups enforcing strict least-privilege, tier-to-tier access controls.
- **Compute & Database:** Configured Auto Scaling Groups with launch templates for Web and App tiers, and deployed a Multi-AZ-ready RDS MySQL instance securely isolated within private subnets for resilience.

Terraform AWS Infrastructure using Workspaces & Modules – Terraform, AWS, HCL

[GitHub](#)

- **Modular IaC:** Built reusable, environment-agnostic Terraform modules with clearly separated variables, providers, and outputs to standardize AWS resource provisioning across multiple projects and teams.
- **Multi-Environment Management:** Leveraged Terraform workspaces to safely manage isolated state files for development, staging, and production environments from a single, version-controlled codebase and repository.
- **Remote Backend Integration:** Configured a secure S3-backed remote state setup within the module structure, enabling consistent, collaborative, and conflict-free infrastructure provisioning across the team.

Load-Balancing using NGINX and Docker – Docker, NGINX, Linux, AWS EC2

[GitHub](#)

- **Containerization:** Built custom Docker images and deployed multiple isolated containers, each running an independent instance of a web application on its own dedicated host port.
- **Load Balancing:** Configured NGINX as a reverse proxy performing round-robin load balancing across all containers to evenly distribute incoming traffic and improve fault tolerance.
- **Outcome:** Demonstrated scalable, highly available, containerized infrastructure management on AWS EC2 using core Cloud and DevOps principles, automation, and best practices throughout.

Terraform S3 Remote Backend Setup – Terraform, AWS S3

[GitHub](#)

- **Remote State:** Provisioned a dedicated S3 bucket via Terraform and configured it as a remote backend to securely store, version, and centrally manage the `terraform.tfstate` file across the team.
- **State Management:** Implemented and documented a safe state migration workflow between local and S3 backends, enabling controlled infrastructure teardown without state file conflicts or data loss.
- **Best Practices:** Documented recommendations for enabling S3 versioning, server-side encryption, and DynamoDB-based state locking to further harden the backend for production use.

Education

4Achievers – DevOps Trainee (Offline)

Oct 2025 – Mar 2026

Git, Linux, Kubernetes, Docker, Ansible, CI/CD & Cloud Deployment; industry-level project exposure

Master of Computer Applications (AI/ML)

2025 – Pursuing

Lovely Professional University (Distance Learning)

Bachelor of Arts – Economics

2021 – 2024

Kumaun University

Achievements

- **SSC CGL Pre:** Cleared the SSC CGL Preliminary examination within 4 months of focused preparation, reflecting strong discipline, time management, and consistency under a tight timeline.
- **SSC CHSL Pre:** Cleared the SSC CHSL Preliminary examination, demonstrating consistent aptitude and reasoning skills across multiple competitive exam formats.
- **French Language:** Learned conversational French within 2 months, showcasing a fast learning curve and strong adaptability to new skills outside the technical domain.
- **District Marathon:** Secured 1st position in a district-level marathon, reflecting discipline, endurance, and a consistent, goal-oriented mindset.
